BUG-TEK Fantastic For Removing Bed Bugs
From Your Home and Perfect For Travellers!

BugTek

Bug-Tek is an insecticide born of advanced technology. It is non-toxic, inflammable and odourless. Use Bug-Tek inside the house, barn and garden. 100% safe and effective.

Bug-Tek does not stain. It can therefore be used on textiles and wood.

Bug-Tek disintegrates quickly when it meets living organisms, but is very resistant when applied to inorganic surfaces. This is why it remains efficient for a long time, without any risk of it infiltrating the food chain or affecting the environment.

Bug-Tek is a new product that answers to all the rules and regulations of insect elimination. In other words, it is safe for the user and the environment and has no side effects.

With Bug-Tek, all bug problems can be resolved without any danger for adults and children alike, as well as any warm-blooded animal such as cats, dogs and birds.

Bug-Tek lasts for a long time on inanimate surfaces indoors and outdoors. It will continue to kill bugs for about 4-6 weeks. After this it will still continue to do its job, but because it has now begun its biodegradability process, it will start to be less effective. As soon as it meets organic matter (humans, soil, water, plants) it degrades rapidly and completely in function of the temperature and leaves nothing behind. All cold-blooded animals are sensitive to Bug-Tek, therefore aquariums and terrariums must be well covered before the use of Bug-Tek around them.

Bug-Tek is perfect for taking with you on vacations. Spray your hotel room and never worry about bringing bugs home with you.

Read our Bed Bug Report for more information on bed bugs!
