Reform Science: Its Logic and Structure

Method and Properties of the Reform Science

Reform science is a *theoretical* science; based on the method of *systemic intuition.* It is the only science that is able to achieve the truth; which corresponds to Hegel's dictum that '*truth cannot be observed, it can only be thought'*.

Therefore, reform science cannot be verified experimentally; on the other hand, it takes into account all achievements of modern science and can provide a valid explanation to every experimental fact. Reform science solves the problems beyond the reach of modern science.

Reform science has *a structure* common for all branches of science, which allows to introduce the *classification of concepts*, thus purifying and organizing the whole science in *a systemic order* Reform science consists of three parts.

Reform Physics. Main Results

Some of the main results of our research in reform physics are listed below:

- the pair of virtual electron and positron is the origin of the universe;
- there exists ether, primary medium consisting of virtual positroniums;
- ether radiates mesons and neutrons; cosmic rays its proper radiation;
- essence of nuclear interaction is conservation of energy by alternate transformation of electric energy to magnetic and vice versa in D-atoms;
- excited by photons atoms and neutrons respond with neutrinos;
- nuclear structure evolves by shell, D-atom being its basic element;
- nuclear structure of atom can be modeled by electric LCR-networks;
- structure of U-atom is realization of the implicit structure of H-atom.

Historic Progress of Civilization

The spiritual progress of humankind during the prehistoric period, the period of recorded history and the period of globalization seems to look as is shown in Fig.2.
