

Dear Ms. Noah Beck, Manager of the Conference:
Taking into account the following facts:

(1) the fundamental character of our almost 30-year-old research in physics that has revived the very concept "Theoretical Physics", the foundation of university education, the center of human ideology in general;

(2) that our research has discovered the true sense of the concept "General System Theory" thus making it possible to start reforming modern science in general and, following works by Karl Marx, has turned such socially important bodies of knowledge as politics and economics into true sciences;

(3) that modern science, presented by the UNESCO, first of all, has for decades prevented us under false pretense from participating at international conferences, blocking all our calls to it for a true consideration of our research, hiding our calls and some times substituting them by their dangerous provocations, while the so-called 3rd International Congress on Physics 2022 in Rome may prove to be another dangerous provocation;

(4) that the present general crisis of civilization presents now the main threat to civilization while our above research paves the way to settling that general crisis;

we declare that, unless the UNESCO has no doubts about the true nature and the great importance of our research, let them grant us the sum of three million US dollar via a Swiss bank beforehand and, besides, organize a new institute, the World Reform Center, in Switzerland or the Czech Republic (Prague), under our direction, committed to settling the above general ideological crisis; afterwards we would make a full virtual (or on spot) report on our research and answer all questions thereof.+

Yours sincerely,
Igor Makarov
