

## Flying Disks Found in State

(Continued from Page One)

about the reported finding of a flying disk on the Texas Gulf coast other than that his public relations office had received a call from the Houston Chronicle.)

The San Angelo Standard Times said Monday that an observer with the McDonald observatory situated a mile high in the Davis mountains at Fort Davis said the flying disks are "man-made" and not any asteroid disturbance.

The second flying disk was reported found by Bob Scott, a farmer living two and a half miles east of Hillsboro. He said the disk fell on his place Friday, and that it resembled a saucer. He said it was so bright he could not look at it very long.

He notified O. F. Kissick and Joe Gerick, Hillsboro, who went to the field and investigated. Most of it had melted, they said. Gerick said one piece looked like tin foil, but when he picked it up, it appeared to be celluloid.

Another development in Houston was a suggestion by Charles Odom, 23 Air Force captain in the last war, that the flying disks might be "crystal balls" similar to those he said were used by the Nazis.

He said these balls were electronically operated, and while in mid-air would send back to a radar screen on the ground the altitude, speed and other data of bombers it approached. He said the balls would fly up to the altitude of bombers, were apparently magnetized, and then flew along with the plane formations.
