

Guided Missile Secrets Known

LOS ANGELES, May 27. (U.P).—
“Basic scientific principles” for
development of radio-guided mis-
siles already are known, Dr. H. J.
Stewart, of the California Insti-
tute of Technology Jet Propulsion
Laboratory, declared today.

The scientist told an aviation
meeting of the American Society
of Mechanical Engineers that the
guided missile development now is
in the same stage as heavy bomber
development was at the end of
World War I.

“But we need not take 25 years
to develop the guided missile as
we did the heavy bomber, because
the importance of a vigorous pro-
gram has been recognized,” he
said.
