

Considering An Abortion Post **COVID-19 Vaccine?** Here's What To Know

CONCEPT OF THIS.....

- **Is it safe to take abortion pills after receiving the COVID-19 vaccine?**
- **How does the abortion pill work in usual?**
- **Can you consume the abortion pills right after receiving the COVID-19 vaccine?**
- **What are the common side effects of an abortion pill you can expect?**
- **How can you get abortion pills in the midst of a pandemic?**

INTRODUCTION

Unwanted pregnancy can occur at any time. In the midst of an ongoing pandemic, it has become difficult to access an abortion pill. Along with that, there have been doubts concerning abortion pills in conjunction with the **COVID-19 vaccine**. Will this pair have any negative consequences on one? Is it safe? And, most importantly, where can one get an abortion pill? Don't be concerned. We'll go through some of the above questions in this blog. We suggest you read the entire blog for a better understanding.

Is it safe to take abortion pills after receiving the **COVID- 19 vaccine?**

In this situation, it is safe to use an abortion pill. There is no serious complication to using abortion pills after getting the COVID-19 vaccination. The side effects differ from individual to person. However, certain side effects are likely to take place during the first 24-48 hours after getting the vaccination. Fever, body chills, pains, and tiredness are some of the side effects which are very common and can be cured.

How does the abortion pill work in usual?

In general, you will have mild cramping and bleeding after taking the abortion pill. For a medical abortion, you must take a mifepristone pill along with a misoprostol pill, by which you will have your abortion within a week.

The first abortion pill, mifepristone, inhibits the key hormone progesterone that supports the pregnancy. The second abortion pill, misoprostol, causes uterine cramping, which leads the uterus to empty. Misoprostol should be consumed one to two days after the initial dose. Similar to menstruation, it usually causes substantial vaginal bleeding 4 to 6

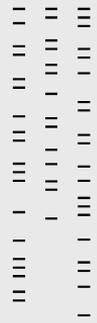

Can you consume the abortion pills right after receiving the **COVID-19 vaccine?**

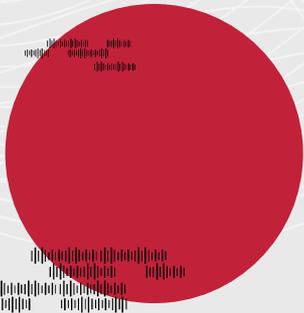

After taking the COVID-19 vaccination, one may experience severe physical pain and other side effects. In this case, we recommend that you take the abortion pills (**Misoprostol and Mifepristone**) 24-48 hours after having the vaccination. Waiting a certain amount of time would help you to avoid the vaccine's potential negative effects, which would be in addition to the potential side effects of the abortion pills.

What are the common side effects of an abortion pill you can expect?

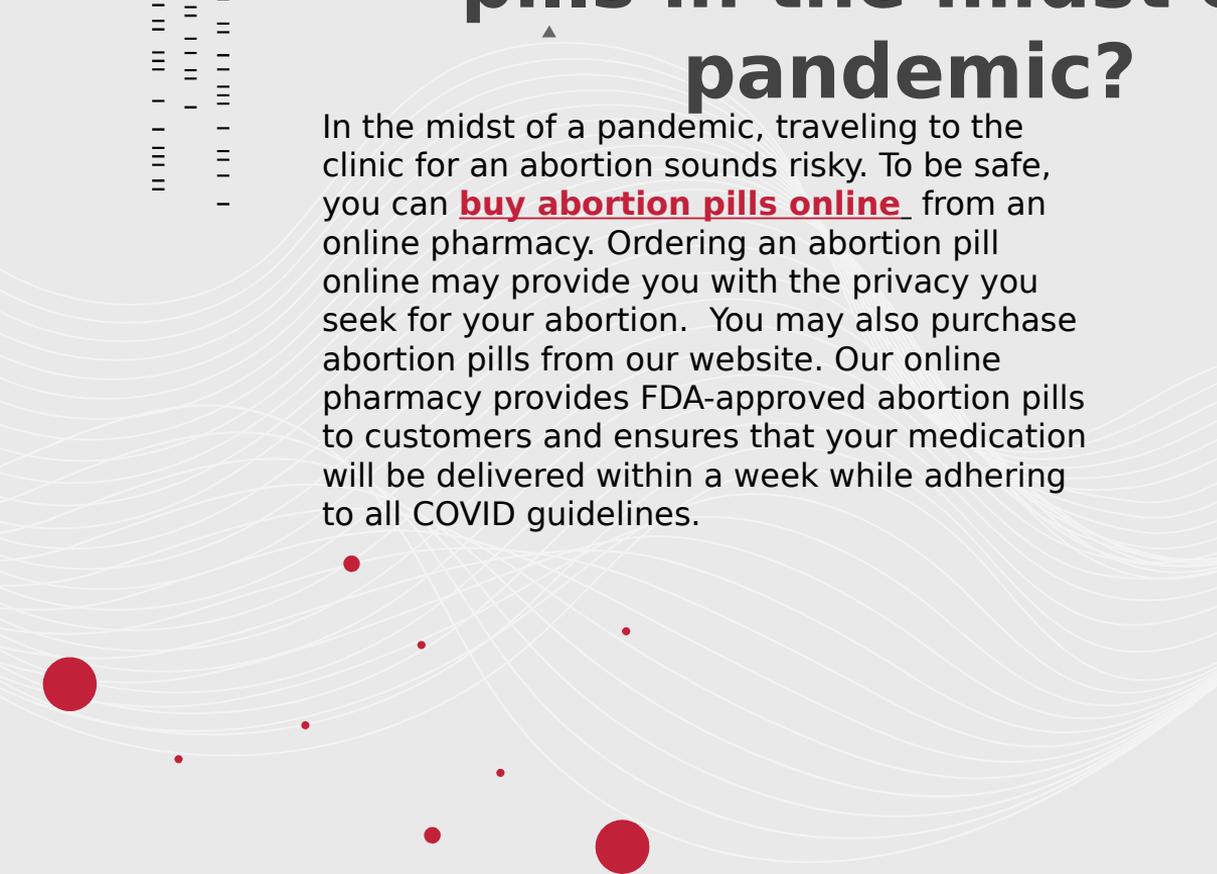

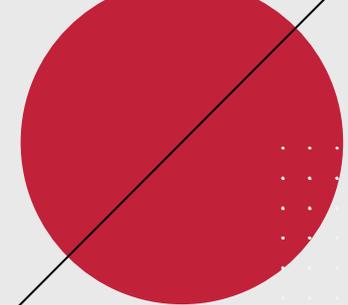

Bleeding and cramping are common side effects, as they indicate that your abortion is starting to function. Cramping and bleeding might last for up to a week. Along with it, you will have some mild side effects such as **nausea, weakness, fever or chills, vomiting, headaches, and diarrhoea**, all of which are curable. However, if any of these side effects persist, we recommend that you seek medical attention

How can you get abortion pills in the midst of a pandemic?
