

Lead Health Affects – Workers are exposed to lead as a result of production, use, maintenance, recycling, and disposal of lead material and products. Lead exposure occurs in most industry sectors including construction, manufacturing, wholesale trade, transportation, remediation and even recreation.

JANUARY SAFETY CAMPAIGN!!
LEAD EXPOSURE AWARENESS

Exposure to high levels of lead may cause anemia, weakness, kidney and brain damage. Very high lead exposure can cause death. In the general population, lead may be present in small but hazardous concentrations in food, water, and air.
