

# US CCS Trade Development Mission to the UK

## 28 February – 4 March 2022

On the heels of COP26, the British Consulate-General Houston invites you to join a first-of-a-kind delegation to the UK for a deep dive into the UK's carbon capture and storage (CCS) efforts as a pathway to achieving the country's net zero target by 2050.

This program intends to bring together the technical experience of US industry with the industrial cluster planning experience of the UK. The Mission offers private industry stakeholders access to closed door conversations with key UK project and government entities.

### Objectives:

1. Hear from government and the private sector about the UK's CCS regulatory and policy landscape.
2. Meet with UK Industrial Cluster Plan Managers to hear about their development process to date.
3. Learn about UK supply chain capabilities and challenges, and opportunities for US collaboration.
