

## Magnetic Vitalizing Adobe detox

**MVA detox**, frequency enhanced

### What is MVA detox?

Magnetic Vitalizing Adobe detox is enriched with frequencies which increase its effectiveness and consists of a unique blend of very fine pure minerals with magnetic properties. The magnetic character means that MVA detox is negatively charged. It is this magnetic property that makes MVA so effective in removing 'body foreign substances' or in other words toxins from our bodies.

Because our bodies are made up of the same elements that are in MVA detox, our bodies are able to extract 'what they need', giving MVA detox a nutritional value as well.

MVA detox is extracted manually and is therefore available in a limited quantity.

### How does MVA detox work?

MVA detox attracts by its magnetic properties (MVA is negatively charged) the mostly positively charged toxins to itself, allowing toxins to bind with the MVA detox.

MVA can absorb 100 times its own volume of toxins. Because MVA detox is absorbed through the digestive tract, the bound toxins are also excreted through the faeces.

For optimum effect, we recommend also using PH balance for a. the de-acidification of the body and b. for the extra oxygen that is released when it comes into contact with the stomach acid. Extra oxygen promotes the elimination of toxins and the recovery of cells.

### Graphene oxide:

There has been a lot of fuss lately about the presence of graphene oxide in our bodies. We observe this substance in blood samples under the microscope (cell analysis) in young and old, vaccinated and unvaccinated. So it seems we are all potentially affected.

*Why do we not want graphene oxide in our bodies?*

For two reasons: Graphene oxide is a foreign substance to the body and is therefore a toxin and number 2; Graphene oxide, through its network-forming properties, makes our bodies more susceptible to man-made radiation, which has increased dramatically since October 2019. When there is enough graphene oxide in a person's body, people start to function as a kind of 'sending and receiving station', similar to transmission towers. This means that a person is 'stressed' 24 hours a day and such continuous stress is highly likely to affect a person's wellbeing, including the people, children, animals and plants around that man or woman. This can be compared to wearing a laptop on your bare skin 24 hours a day, which means you are constantly exposed to the laptop's radiation and influence.

### Is there a method to safely remove graphene oxide from our bodies?

As this has become a global phenomenon, passionate researchers among us have explored the possibility of removing graphene oxide from the body. They found by taking a blood sample before and after taking MVA detox that the amount of graphene oxide in the blood was significantly reduced. Of course, we also tested this ourselves in the Self-Care Support Team and came to the same findings. From these tests we looked for supporting frequencies to enhance this process and this also proved to have an improved effect.

### For whom can MVA detox be used?

People with fatigue, headaches, skin problems or rashes, strong smelling urine, high stress, constipation, vaccinated people, long term medication use, concentration problems, people with fungal and parasitic load and all professions or conditions where people are exposed to 'toxins'.

### Dosage MVA detox:

MVA can be applied both internally and externally. Given the specific effect, our suggestion is to use the [Supplement testing](#) to test what the right amount and number of times a day is needed for your body to function optimally.
