

# Universe Endings

Sgt D'Silva

Think about it.

# THE BIG RIP

- The coolest theory
- As the universe expands, the gravity it contains will weaken

A cosmic background featuring a bright, glowing orange and yellow streak that resembles a comet or a nebula, set against a dark, starry space. The text is centered within a white rectangular border.

**WHAT IS THE  
BIG RIP?**

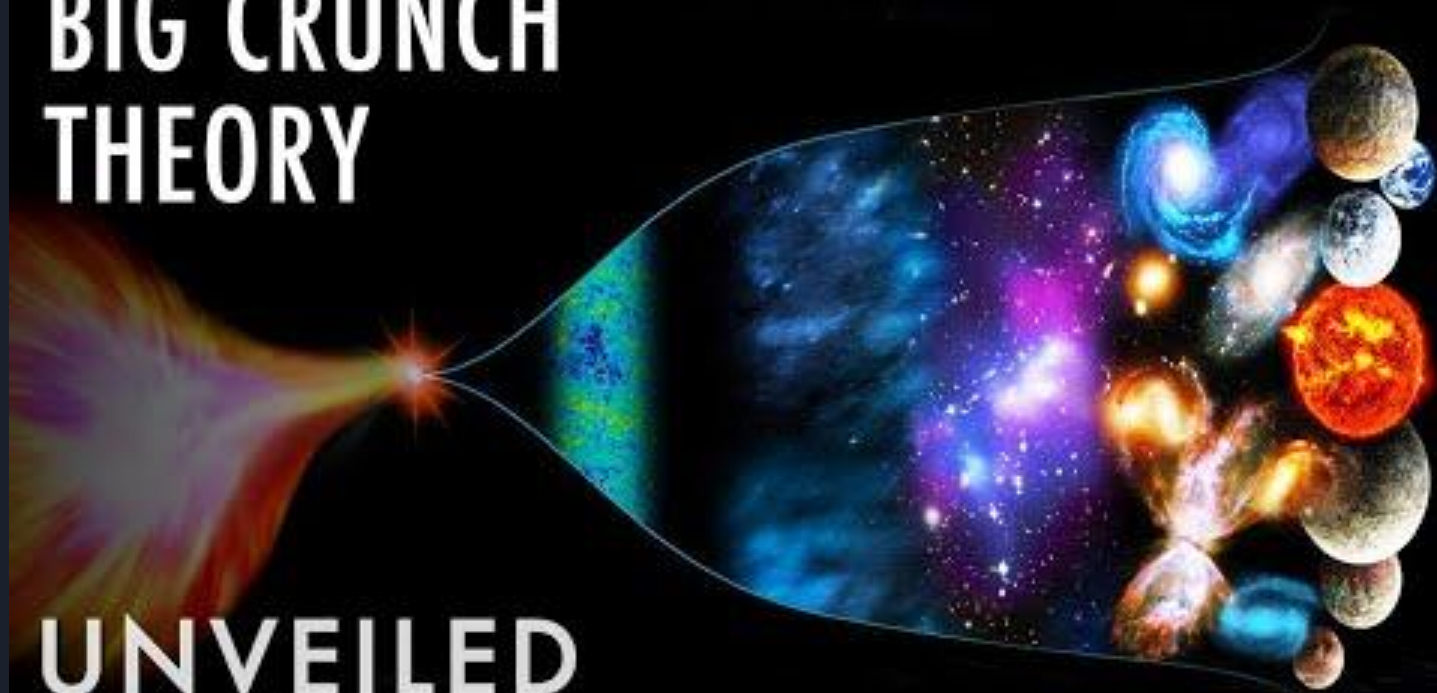

# THE BIG CRUNCH

- Very Theorized
- The Universe expands to its largest size, then starts to contract at a rapid rate
  - Making stars, planets, galaxies, collide creating new elements
- Implodes everything into a singularity
- Higgs Field
- Dark Energy

# BIG CRUNCH THEORY

UNVEILED

# THE BIG FREEZE

- Most likely to happen
- Entropy at Max = Time slows down
- No more particles move fast enough
- Gases get spread out so thin that stars cannot form
- Time = Endless Void :)

The Future  
of an **Expanding**  
**Universe**
