

Creative Biolabs' Afuco™ platform – the key to your ADCC⁺ success

Our Afuco™ technology platform incorporates cutting-edge glycoengineering technology and expertise to enable us to optimize the ADCC activity of therapeutic antibodies. Powered by Afuco™ technology, we provide our clients a comprehensive antibody modification protocol that allows oligosaccharides in the Fc region to be free of any fucose units. Fucosyltransferase engineered stable cell lines are available for subsequent ADCC antibody preparation.
