**The best way to get data by scraping from Facebook.**

You will be able to gather data that

- a) the logged-in user has access to
- b) the logged-in user has given the app access to;

You can only retrieve the current user's data (that you have asked for via various permissions scopes), certain pieces of their friend's data and public data. As far as I know, there is no way to query Facebook for a list of public profiles. And if anyone tries to breach Facebook privacy policy, then they might be getting banned from Facebook.

There are many other tools/software (that may or may not be free) available that grab data from various platforms like social media websites, eCommerce stores, or any other deal based website as per your requirement. But sometimes you can get some limited information, inaccurate data with the help of that tool/software.

In order to export such authentic information, you need to use the [Facebook Data Scraper](#) desktop application by using this tool you can easily scrape important information from Facebook and can grow your business.
