Even if you want to scrape data from different websites like Yelp, Facebook, and Amazon, etc you can also create a project using a script for scraping data from these sites. You can build your own scraper according to your requirement using a script.

What is the best software to scrape emails or phone numbers from Yelp?

Yelp Data Scraper is the best software for scraping data from Yelp sites it can scrape page URL, Business name, Phone numbers, Business address, Website link, Category service, and Review of the business. There are some filters by using which you can easily make your search result more precise according to your need like if you only need reviews and phone numbers you can apply this filter on your search query and will get the required data.

Yelp is the home of the business audits or reviews and suggestions where clients of organizations drop their opinion or review on the organizations they have utilized. Reviews on Yelp are acceptable, and business owners can't expel negative reviews from their business. Starting in 2014, Yelp has more than 66 million organizations recorded on it – this number has incredibly expanded, and with this, there is no doubt that Yelp holds an enormous dataset important to organizations, advertisers, and business specialists. A portion of the information on Yelp pages incorporates the name of organizations, area (scope, longitude, address, state, city, postal division), value range, telephone, and email, just as star reviews and also in textual form.

What are the limitations of Anysite Data Scraper and why it is different from other scraping tools?

The limitations of this tool are that it can only scrape data that is publicly accessible; it can not scrape private data. Anysite Data Scraper can only scrape data it cannot generate any kind of data by itself. For scraping data from multiple pages, you need to create a project by using a script if you want to scrape data from Facebook and Yelp you need to add a script for it and can easily build [Yelp Data Scraper](#).

There are also some features that make Anysite Data Scraper different from other scraping tools like sometimes your computer or software shut down for some reason unexpectedly you don't need to worry about your scraped data if you can recover it. Sometimes internet connection is lost, this tool can detect the problem and stop scraping data and you can resume it where it stops when you get back to the internet connection. You can also apply some before extraction filters these filters help you in making your search result more exact according to your need. These are some features and limitations that make Anysite Scraper different from other scraping tools.
