About this Webinar

Learn Python Now!

Gain mastery over the world by learning Python and Data Science as soon as possible!

Do you want to learn more through enjoyable projects? . Python for children offers an approachable and enjoyable introduction to coding, laying the groundwork for further education.

This course is designed for beginner-level learners to make them aware of data science and Python.

Learning Python also equips kids with the self-assurance and digital literacy they need to succeed in the technologically advanced current world.

Python encourages children's creativity and curiosity because it is a flexible language that can be used in a variety of industries, including game development, data analysis, and web development.

Children gain important problem-solving and logical thinking skills that are transferable to a variety of fields by learning Python.

Experienced trainers have designed this course for basic, intermediate, and advanced level learners, and it will help you learn the concepts through projects and one-on-one interactions.

**Starts At : 10:00 AM**

Duration : 01:00 Hrs

Meeting ID : M202307163
